Larger Research Projects

- **Pricing dynamics Research:** Together with Martin Gaynor (Carnegie Mellon) and John Van Reenen (MIT), we have worked with the Health Care Cost Institute to assemble the nation’s largest collection of private insurance claims data. Crucially, this data includes geographic information and the prices insurers negotiate with providers for care delivered to their beneficiaries. We will be producing a series of papers analyzing pricing dynamics within the US health care industry. This includes work analyzing the variation and growth in health care providers’ prices, work testing the extent to which providers’ cost shift between public and private patients, and examining the impact of consolidation on hospital prices.
- **Price Transparency and Value-Based Insurance Design Randomized Controlled Trial:** Together with Fiona Scott Morton (Yale) and Michael Chernew (Harvard), we are working with a large commercial insurer to carry out a large randomized control trial of the impact of price transparency and value-based insurance design on patient choice of treatment and provider prices.

Writing for the Popular Press: Editorials in the Financial Times, the Guardian, and the Huffington Post.
